PROFESSIONAL SUMMARY

Results-driven AI/ML Engineer with expertise in developing and deploying machine learning models using Python, leveraging natural language processing techniques to drive business growth and improvement. Proficient in designing and implementing data-driven solutions, with a strong foundation in computer science and a proven track record of publishing research papers on innovative AI/ML applications. With a solid educational background in computer science and a passion for staying up-to-date with industry trends and advancements, I am well-equipped to drive innovation and excellence in AI/ML engineering.

CORE SKILLS

Python

WORK EXPERIENCE

- Led the development of a machine learning model that increased predictive accuracy by 25% and reduced training time by 30% through optimized data preprocessing and feature engineering techniques.
- Built and deployed a natural language processing pipeline that improved text classification accuracy by 15% and increased processing

Improved text classification accuracy by 15% and increased processing speed by 40% using parallel processing and GPU acceleration.

- Optimized and fine-tuned a deep learning model that resulted in a 12% increase in model recall and a 10% decrease in false positives, leading to improved overall model performance and reliability.
- Delivered a real-time object detection system that achieved a 95% detection accuracy rate and reduced latency by 50% through the use of transfer learning and model pruning techniques.

PROJECTS

Developed a natural language processing model using Python, leveraging libraries such as NLTK and spaCy to achieve an accuracy of 92% in text classification and sentiment analysis. This project resulted in a 30% reduction in manual processing time for text-based data, enabling faster decision-making and improved operational efficiency.

EDUCATION

Bachelor's degree

ACHIEVEMENTS

Published research paper

LANGUAGES
